### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for the examiner's amendment was given in a telephone interview with Mr. Mark N. Fitzgerald, reg. No. 48,300 on October 14, 2005 to overcome the 37 CFR 1.121 (c)(2) issue on the amendment filed August 4, 2005.

In the claims:

I. In claim 1;

(i) line 8, replace "the" with --[[a]] the--

II. In claim 3;

(i) line 3, replace "the" with --[[a]] the--

(ii) lines 3-8, replace "downloading from each processor, at a command of each processor kernel at the beginning of the intervening strobe interval, accumulated control information communications ~~into the network for a total exchange~~ between all processors so that each processor is informed of the number and identity of incoming control" with --downloading from each processor, at [[the]] a command of each processor kernel at the beginning of [[a]] the intervening strobe interval, accumulated control information communications ~~into the network for a total exchange~~ between all processors so that each processor is informed of the number and identity of incoming control--

3. The following is an Examiner's Statement of Reasons for Allowance:

The prior art of record does not expressly teach or render obvious, in the context of the claims taken as a whole as recited in independent claim 1.

The reporting of the number of requests to a particular system on an interval basis was uncovered in U.S. Patent 6,173,306 (Raz et al.) and the communication between multi-processors via exchange of control information communication (processing data synchronously) was uncovered in U.S. Patent 5,600,843 (Kato et al.). The references taken alone or in combination does not expressly teach or render obvious, in the context of the claims taken as a whole, as recited in independent claim 1 the global exchange of control information communications at the end of the defined time interval during the intervening strobe interval so that each processor is informed by all of the other processors of a number of incoming control information communications to be received by each processor in a subsequent time interval.

Nor was a reference uncovered that would have provided a basis of evidence for asserting a motivation that one of ordinary skill level in the art at the time the invention was made, knowing the reporting of the number of requests to a particular system on an interval basis and the communication between multi-processors via exchange of control information communication (processing data synchronously) would have performed a global exchange of control information communications at the end of the defined time interval during the intervening strobe interval so that each processor is informed by all of the other processors of a number of incoming control information communications to be received by each processor in a subsequent time interval as recited in the context of the independent claim 1.
